ALPHA CELLULOSE POWDER FROM COTTON WASTE

[EIRI-1645]

Cellulose is a natural carbohydrate high polymer (polysaccharide) consisting of anhydro glucose units joined by an oxygen linkage to form long molecular chains, that are essentially linear cellulose exist in three form. 1. Alpha, 2. Beta, 3. Gamma. Alpha cellulose has the highest degree of Polymerization (DP). It is insoluble in strong sodium hydroxide solution. The beta and gamma form have much lower DP and are known as hemicelluloses.

Cost Estimation

Plant Capacity	2 MT/Day
Land & Building (1500 Sq.Mt.)	Rs. 2.57 Cr.
Plant & Machinery	Rs. 90 Lacs
W.C. for 3 Months	Rs. 93 Lacs
Total Capital Investment	Rs. 4.51 Cr.
Rate of Return	16%
Break Even Point	65%

CAST POLY PROPYLENE FILMS (CPP FILM) [EIRI-1646]

The term CPP is used in the plastics industry to describe polypropylene-based films produced by a cast extrusion process (Cast Polypropylene). Although there are some CPP films used for hygiene applications and synthetic paper (usually involving fillers and other additives), the term CPP is usually used to refer to high clarity films targeting lamination, metallization and packaging applications.

Cost Estimation

Plant Capacity	16.67 MT/Day
Land & Building (4000 Sq.Mt.)	Rs. 2.45 Cr.
Plant & Machinery	Rs. 2.80 Cr.
W.C. for 2 Months	Rs. 9.22 Cr.
Total Capital Investment	Rs. 14.77 Cr.
Rate of Return	46%
Break Even Point	34%

SPICES GRINDING [EIRI-1647]

Spices which are basically plant products, have a definite role to play in enhancing the taste flavour, relish or piquancy of any food, most of the spices are pagrant, aromatic and pangent. They comprise seeds, bartes, rhizome, leaves fruits and other parts of plants, which belong to varigated species and genera since time immorial, india in renamed to be the have of spices. Most important spices like black pepper (king of spices) cardamom (queen of spices) cardamon (queen of spices), ginger, chillies and turmeric, which are produced in India import it great reputation and these constitute. The major group of spices. In the list of spices, clave, nutmeg, cinnamon and cassia are known as tree spices,

Cost Estimation

Plant Capacity	2 MT/Day
Land & Building (1500 Sq.Mt.)	Rs. 1.30 Cr.

Break Even Point	49%

DOOR HINGES (MILD STEEL AND STAINLESS STEEL)

[EIRI-1648]

Hinges have extensive applications in joining doors, windows and similar other structures requiring a movement of one flank with respect to a fixed frame. In housing, the door flanks can have an angular movement with respect to the door frames of wood or steel or aluminium. Its function is to joint one part to the other. Versatile operation of hinges have played a great role mechanisation and modernisation in present mechanised life. Hinges are extensively used in safes, almirahs, boxes of all sizes, machines covers etc. Mild steel is extensively being used for manufacturing hinges for all purposes but brass, S.S. and Aluminium hinges have also been manufactured because of their respective properties, uses and applications. Though the manufacturing process is same for all materials of hinges yet some balancing equipments are needed to be added with the main machineries when material changes.

Cost Estimation

Plant Capacity	400 Kgs./Day
Land & Building (1000 Sq.Mt.)	Rs. 1.75 Cr.
Plant & Machinery	Rs. 48.20 Lacs
W.C. for 2 Months	Rs. 56.43 Lacs
Total Capital Investment	Rs. 2.97 Cr.
Rate of Return	20%
Break Even Point	58%

CASHEW NUT PROCESSING [EIRI-1649]

Cashew (Anacardium occidentale L.) a native of Eastern Brazil introduced to India just as other commercial crops like Rubber, Coffee, Tea etc. by the Portuguese nearly five centuries back. The first introduction of cashew in India was made in Goa from where it spread to other parts of the country. In the beginning it was mainly considered as a crop for afforestation and soil binding to check erosions. The nuts, apple and other by products of this crop are of commercial importance. Though its commercial exploitation began from the early 60's, marginal lands and denuded forests were the areas set apart for the plantation development.

Cost Estimation

Land & Building (1000 Sq.Mt.)	Rs. 1.39 Cr.
Plant & Machinery	Rs. 58.35 Lacs
W.C. for 1 Month	Rs. 84.27 Lacs
Total Capital Investment	Rs. 2.90 Cr.
Rate of Return	32%

BIO GAS PRODUCTION & BOTTLING PLANT [EIRI-1650]

Energy is becoming a scarce and costly input in the world. Oil which accounts for a sizeable portion of our energy consumption, has been making a very heavy tax on our foreign exchange resources. Other than coal, we must also find alternate resources of energy centered around solar, wind, tidal and bio-gas.

An effective bio-gas programme leads to efficient use of cow dung for gas recovery and partial supplement to plant nutrient requirement. Bio-gas programme leads to improvement in rural living including rural sanitation. Conventional bio-gas digesters set up in India were predominantly of the Khadi Village Industries Commission Model.

Cost Estimation

Plant Capacity	1500 Cubic Meter/Day
Land & Building (2000 Sq.Mt.)	Rs. 1.40 Cr.
Plant & Machinery	Rs. 1.00 Cr.
W.C. for 3 Months	Rs. 40 Lacs
Total Capital Investment	Rs. 4.86 Cr.
Rate of Return	26%
Break Even Point	50%

ISOBOL PROCESSING UNIT [EIRI-1651]

Isobgol (psyllium) is a natural gift to India especially to the North Gujarat and the southern part of Rajasthan since in no other part of the world the climatic conditions are such that which are favourable for growing Isobgol crop. Isobgol is a Persian name which means horse's ear. (Isob means horse any gol means ear) The name completely suits the description of isobgol seed, as it is very much resembles horse's ear. The Isobgol seed has Two parts, the above thin white layer known as isobgol 'hush' or'sat' isobgol' and the inner red known as gola.

Cost Estimation

Plant Capacity	1 MT/Day
Land & Building (600 Sq.Mt.)	Rs. 73 Lacs
Plant & Machinery	Rs. 14.75 Lacs
W.C. for 2 Months	Rs. 22.56 Lacs
Total Capital Investment	Rs. 1.16 Cr.

Break Even Point	39%

10 MW GRID INTERACTIVE SOLAR POLYCRYSTALLINE PV POWER PLANT [EIRI- 1652]

Grid interconnection of photovoltaic (PV) power generation system has the advantage of more effective utilization of generated power. However, the technical requirements from both the utility power system grid side and the PV system side need to be satisfied to ensure the safety of the PV installer and the reliability of the utility grid. Clarifying the technical requirements for grid interconnection and solving the problems are therefore very important issues for widespread application of PV systems. Grid interconnection of PV systems is accomplished through the inverter, which convert DC power generated from PV modules to AC power used for ordinary power supply for electrical equipments.

Cost Estimation

Plant Capacity	10 MEGA WATTS
Land & Building (120000 Sq.Mt.)	Rs. 5.24 Cr.
Plant & Machinery	Rs. 56.00 Cr.

GROUND CALCIUM CARBONATE MICRONIZATION PLANT [EIRI-1653]

Calcite is a carbonate of calcium (CaCO₃) containing 56% CaO and 44% CO₂. It is one of the important industrial minerals also known as 'Calc Spar'. Pure crystallised transparent variety of calcite is known as 'Iceland Spar' which is used as Nicol prism in optical instruments using polarised light. Calcite is the most abundant crystalline form of calcium

Patrons : you can deposit the amount in EIRI Current Account UNION BANK OF INDIA 307201010015149 (IFS Code: UBIN0530727)

Top Industries to Start

carbonate (CaCO₃) Calcite limestone refers to a high-calcium limestone. As for hardness of calcite is concerned, pure calcite has a hardness of 3 Mohs, whereas naturally occurring limestone's lie in the range of 2-4 Mohs. Regarding the formation and occurrence of limestone/calcite mineral, this is widely distributed throughout the world in deposits of varying sizes and degrees of purity.

SOYA MILK AND PANEER [EIRI-1654]

Soyabeans are very much popular as food crop in most of the countries all over the world where a large number of food products are prepared from soyabean seeds. As edible oil milk and milk products giving sources crop the soyabeans are getting wide acceptance. In India too since last few decades. Souyabean seeds have a high nutritional composition; and can be converted in to various states, tastes, colours, flavours and other quality substances. As far as the use of soyabean is concerned it has taken a place from soap industry to food industries like. The soya milk, in particular has been developed like a boon for human beings as large. The specialty lies in the fact that in the reasons when traditional cow milk buffalo milk is not available in sufficient quantity, this milk serves the purpose almost equitably to other animal milk type. Soybeans possess a very high nutritional value. It contains about 20 per cent oil and 40 per cent high quality protein (as against 7.0 per cent in rice, 12 per cent in wheat, 10 per cent in maize and 20-25 per cent in other pulses).

COCOA BUTTER AND COCOA POWDER WITH CULTIVATION [EIRI-1655]

Cocoa Powder (Cocoa) is the food prepared by pulverizing the material remaining after the part of fat (Cocoa Powder) is removed from chocolate liquor. The V.S.chocolate standards define three types of cocos based on their fat content. These are (a) Breakfast, or high fat cocoa containing not less than 22% fat. (b) Cocoa, or medium fat cocoa containing less than 22% but more than 10%. (c) Low fat cocoa, containing less than 10% fat. Cocoa

powder production to Day is an important part of the cocoa and chocolate industry, because of increased consumption of chocolate - flavoured products.

Cost Estimation

Plant Capacity	5 MT/Day

AUTOMATIC LINE FOR PROCESSING FRESH GINGER INTO DRY GINGER, GINGER, OIL, PASTE, POWDER & GINGER JUICE [EIRI-1656]

A genus of rhizomatous herbs distributed in the tropics of the old world, chiefly in India, East Asia and Malaysia. Fourteen, species are reported to occur in India Z-official, which is the main source of ginger, is cultivated on a large scale in India. Bangladesh, Taiwan, Jamaica, Nigeria and Sieria, Leone, from which it is exported to other countries the world and ginger is cultivated also for internal consumption in Sri Lanka (Ceylon) and several East Asiatic countries and the crop has been introduced into Queens hand in Australia mainly for pickling. Ginger is mentioned in the early literature of China and India as a spice. Thus it is one of the earliest of known spices. In the 16th century, the Spaniards introduced it into the West Indies and Mexico.

Cost Estimation

LIQUID GLUCOSE FROM POTATOES [EIRI-1530]

Potato is widely consumed as food all over the world. It contains the starch as a major carbohydrate. Surplus and cull potatoes are used as feed for live stock and also as raw material for the manufacture of starch, ethyl alcohol and a few other industrial products like, dextrose, liquid Glucose etc. The potato contains approximately 18-21% of carbohydrates. The major carbohydrate is starch. This starch is comprising 65-80% of the dry weight of the tuber, is calorifically the most important nutritional component. In the raw tuber, it is present as microscopic granules in levcoplasts lining the interior cell walls of parenchyma tissue. The granule is ellipsoidal in shape, 100N*60N, with striations like an oyster shell. Under polarized light, the granule shows an irregular black cross. Electron micrographs reveal a surprising smooth surface structure. The ratio of amylase to amylopectine in potato starch is 24:76 and the gelatinization temperature ranges from 56oC to 69oC with water this starch forms a translucent paste of high viscosity. Freshly harvested mature tubers contain more sugars than the large ones. A slight rise in total sugars is observed when tubers are stored at 20-30oC. However when the storage temperature is 4oC or less., the total reducing sugars increase, the rate and extent of increase being greater when lower the temperature down to the freezing point. The maximum sugar concentration (3 to 10%) is reached after 4-8 weeks. Potato starch is produced from varieties selected and grown for their high starch, low protein and low fibre contents. In USA and else where, only surplus potatoes and tubes unsuitable for table use are used for starch production.

RIGID PVC FILM MANUFACTURE FOR PHARMACEUTICALS BLISTER PACKAGING [EIRI-1533]

Plastic films (PVC) have got wide uses including for garments and saree packaging. Polyvinyl chloride (P.V.C.) is one of not the largest single volume plastics material in general use in the world. It is potentially one of the lowest cost materials. The French chemist Regnault first discovered P.V.C. in 1835 and it was initially marketed commercially in 1827. P.V.C. has achieved this market leadership because of its good physical properties, its compounding versatility for a wide variety of applications, its low cost, and processing ease. These desirable properties include self extinguishing characteristics, water, chemical and abrasion resistance, good strength

properties and a complete range of colours. The compounds range from soft flexible films, to rigid, high strength products. Plasticizers lubricants, fillers and stabilizers are used to produce this versatility and it possible to make a compound with a right balance of properties for almost any application. P.V.C. products will melt but will not burn and good weather ability has been achieved by compounding. There are various theories on compounding of P.V.C. but the PVC processor especially in small scale sector in India because of lack of availability and high price of sophisticated equipments instruments testing facilities trained technical personnel, raw materials looks forward to something practical which wood benefit him in knowing the best possible and most economical method of PVC compounding. Compounding process includes (i) formulation of compound according to the properties desired (ii) Palletizing. The palletizing process is done either by rotary knife cutter or granulator.

PRESTRESSED CONCRETE POLES (PSC POLES) [EIRI-1534]

Wooden, steel and concrete poles were used for power distribution lines since 19th century. The first poles used were wooden poles. When demand for poles increase and as the power lines under construction required longer poles suitable for resisting larger horizontal forces, steel poles were introduced in substitution to wood. Though both materials are still in use through out the world, with wood primarily used for short length small forces country lines the general trend is to substitute both the materials with concrete and Use reinforced and prestressed concrete poles instead. Wooden have limited life and steel poles have a longer life compared to wooden poles requires continuous maintenance for protection against corrosion concrete and particularly prestressed concrete poles can be considered as having an unlimited life without maintenance cost for their corrosion protection. Poles supporting power lines are subjected to relatively small vertical forces and primarily to large horizontal forces at bottom. The horizontal forces at their top are smaller along the axis of the power line & much larger on direction perpendicular to it.

FROZEN POTATO PATTY [EIRI-1529]

Frozen potato patty is an important snacks food having good demand and is being appreciated by masses. Freezing food preserves it from the time it is prepared to the time it is eaten. Freezing food slows down decomposition by turning residual moisture into ice, inhibiting the growth of most bacterial species. In the food commodity industry, there are two processes: mechanical and cryogenic (or flash freezing). The freezing kinetics is important to preserve the food quality and texture. Quicker freezing generates smaller ice crystals and maintains cellular structure. Cryogenic freezing is the quickest freezing technology available due to the ultra low liquid nitrogen temperature (-196°C). Frozen products do not require any added preservatives because microorganisms do not grow when the temperature of the food is below -9.50°C, which is sufficient on its own in preventing food spoilage.

HYDROXY PROPYL GUAR (HPG) AND CARBOXY METHYL HYDROXY PROPYL GUAR [EIRI-1526]

The guar bean tetragonolobus, an annual legume, is the source of guar gum. It grows best under conditions with frequent rainfall, but tolerates arid conditions well. India grows 80% of world production of Guar gum but due to strong demand, it is being introduced into new areas. It is mainly grown in areas of India (Rajasthan, Haryana, Gujarat and Punjab) Pakistan, Sudan, and USA. India produces 6.0 7.5 lakh tons of guar annually. In India Rajasthan and Haryana states contribute 85% of the total production. In Rajasthan, the district Jaisalmer, Barmer, Nagaur, Hanumangarh Jhunjhunu and Sikar. The districts in Haryana indulged in the production of guar are Bhiwani, Sirsa, and Rewari and the districts in Gujarat are Kutch, Banaskantha, Ahmedabad. Jodhpur city in Rajasthan is one of the India. Guar also known as cluster bean (leguminous crop). Guar is being grown for seed, is an annual plant, about 4 feet high, vertically Each pod is about 5-8 cm long and has seeds.

TOMATO, GUAVA AND MANGO PULP [EIRI-1523]

Guava is a pear or round shaped fruit growing in the tropical region. Guava is one of the most common plants abundantly grown in all regions of India. The trees are usually narrow and trunked. There is almost no bark in these trees. The fruit is characterized by white interior. The inside of the fruit is highly fleshy with a number of hard seeds. Guava fruit is one of the richest sources of Vitamin C. There is also a good amount of pectin in this fruit. A good quality commercial pulp is obtained by passing the guava fruit extracts through 0.7mm sieve. India is the home of mangoes.

PARTICLE BOARD FROM RICE HUSK OR WOOD WASTE OR SUGARCANE BAGASSE OR MIXED OF ALL ABOVE [EIRI-1521]

Development of particle and fibre board has been consequential to man's quest for optimum utilization of timber and wood wastes which earlier were used mainly as fuel. Initial development of particle board took place in Germany during the Second World War when its timber supplies were practically cut-off from the supplying countries. Particle board plants were set up in postwar West Germany to meet the demand for reconstruction. In the fifties particle board manufacturing plants were set up in Europe and USA. The industry has now developed throughout the world. The origin of fibre board can be traced back to the beginning of 20th century in England and USA. It received a fillip in 1934 as a Swedish engineer developed the defibrator process or thermo mechanical pulping process.

LIQUID GLUCOSE FROM BROKEN RICE [EIRI-1516]

Starch is a group of polysaccharides, composed of glucopyranose units joined together by glucosidic linkages. It conforms to the molecular formula, (C₆H₁₀O₅)_n, where n varies from a few hundred to over one million. Starch is found as the reserve carbohydrate in various parts of plants and is enzymatically broken down to glucose to other carbohydrates according to the metabolic needs of the plants.

Industrially, starch is broadly divided into two types viz, natural and modified. Natural starches, also designated as unmodified starches or simply starches, are obtained from grains such as and sorghum. from roots like potato, tapioca and arrow root, and from the pith of the stems of certain palms such as sago. The characteristics of the natural starches are changed by chemical or enzymatic action and the products of these reactions are termed modified starches. This group includes dextrans, acid-modified starches, oxidized starches, starch esters, starch ethers, dialdehyde starches, and cationic starches.

Cost Estimation

Plant Capacity	40 MT./Day

Top Industries to Start

CELLULAR LIGHTWEIGHT CONCRETE BRICKS (CLC BRICKS) [EIRI-1450]

Bricks remain one of the most important building materials in the country. Brick making is a traditional industry in India, generally confined to rural areas. In recent years, with expanding urbanization and increasing demand for construction materials, brick kilns have to grow to meet the demand. It has directly or indirectly caused a series of environmental and health problems. At a local level, environmental pollution from brick-making operations is injurious to human health, animals and plant life. At a global level, environmental pollution from brick-making operations contributes to the phenomena of global warming and climate change. Also, extreme weather may cause degradation of the brick surface due to frost damage. Global warming and Environmental pollution is now a global concern. Cellular Light Weight Technology blocks can be used as an alternative to the red bricks, to reduce Environmental pollution and Global warming. CLC blocks are environment friendly. The energy consumed in the production of CLC blocks is only a fraction compared to the production of red bricks and emits no pollutants and creates no toxic products or by products.

CONVERSION WASTE PLASTIC WITH TYRE INTO ACTIVATED CARBON AND INDUSTRIAL FUEL [EIRI-1444]

The disposal of plastic waste and used tyre by land filling is becoming an increasingly serious problem from an environmental and economic stand point, a better solution is to reprocess tyre into valuable products such as activated carbon other solid carbon form (e.g. carbon black) and liquid and gaseous fuel. A process design is proposed which involves pyrolysis of plastic waste and used tires, activation of the solid residue, partial combustion of liquid to produce carbon black and the use of high BTU gas for process heat. The activation of the solid residue is done using CO₂ which produces CO and activated carbon. The CO₂ is regenerated and the lost carbon is recovered using the boudouard reaction to produce CO₂ and finely divided carbons.

RICE MILL [EIRI-1359]

Rice sheller is the process that helps in removal of hulls and bran from Paddy grains to produce polished rice. The objective of rice milling is to get whole grain rice and preserve most of the rice kernel, in their approximate original shape. In order to improve nutritional and cooking quality of rice, a pre-treatment is given to paddy and the rice so obtained by milling the pretreated paddy is known as parboiled rice. The rice obtained from milling untreated rice is known as raw rice or white rice. Primary milling of rice is an important activity in food grains. Rice is used in almost all parts of India. Few decades ago, rice grains were processed at family level before cooking.

Best Industries to Start and Grow

PLASTIC WATER STORAGE TANKS [EIRI-1487]

The term Plastics usually refers to a large and varied group of synthetic materials which are solid in finished form but at some stage in their processing are fluid enough to be shaped by application of heat and pressure. The use of plastics in building has grown rapidly in the last few years. Plastics were first used for decorative and non structural purposes but because of increased knowledge of the long term properties of plastics particularly resistance to creep and environmental effects some plastics are now available that maintain long term structural integrity, such as piping, doors and windows, water tanks that can contain moderate pressures for a long period of time.

ALUMINIUM COMPOSITE PANELS (ACP) [EIRI-1489]

Aluminium Composite Panels (ACP) are mainly light-weight composite material consisting of two pre-finished aluminium cover sheets heat-bonded (laminated) to a core made of polyethylene plastic material, available in 3mm, 4mm and 6mm thicknesses after finishing and can be curved and bent to form corners. These panels are used widely as exterior covering of commercial buildings and corporate houses. While adding to aesthetic beauty of the structure, they are also resistant to acid, alkali salt spray, pollution and provide good thermal as well as sound insulation. These Panels are widely used due easy maintenance in almost any kind of climate through normal wash with water and mild detergent that ensures long lasting performance.

EPDM RUBBER PROFILES (WEATHER STRIPS, INDUSTRIAL MONO STRIPS) [EIRI-1492]

Ethylene Propylene Diene Monomer Rubber, also named as EPDM in short, is the polymer of ethylene and propylene. Large scale commercial production began in 1963 and the current overall global consumption of EPDM are 800,000 tons per year. EPDM is polyolefine - categorized and has excellent performance of vulcanization and its gravity is the lowest among all rubbers. These are radon copolymers of the two hydrocarbons ethylene and propylene with the ethylene varying from 40 to 70% by weight. This produces a saturated rubber, EPM, which has to be vulcanized with peroxide systems.

Total Capital Investment	Rs. 31.86 Cr.

HDPE, PVC, LLDPE PIPES/ TUBES & FITTING [EIRI-1497]

PVC is a thermosetting plastic. In other words, it can only be softened and molded into form once. If it is softened and remolded a second time it will lose some of its favorable characteristics. PVC is very corrosion resistant. It is not a conductor and will not have an electrochemical reaction with acids and bases that it comes in contact with. For this reason, PVC is sometimes used to coat other materials for protection. PVC also has a high chemical resistance. While it will react with some chemicals, there are a large number of chemicals it will not react with, making it an excellent product for industrial applications. PVC is not without its faults.

Cost Estimation

PARTICLE BOARD FROM RICE HUSK [EIRI-1499]

The technology for manufacture of Rice Husk Particle Board, developed at the Indian Plywood Industries Research Institute, Bangalore, has emerged as one of the best solutions to this problem as it helps to maintain the ecobalance and preserves the eco-system. Patents have been filed in India and many other rice growing countries. This board has emerged as a versatile substitute for wood in a wide range of applications. Moreover, these boards can also be made decorative. The process has been licensed to several firms in India and a turnkey plant has been set up in Malaysia. The firm has also produced floor tile (out of rice husk), fire resistant doors, etc. having granite like finish. What is more, the licensee of the technology has helped to build up a large number of low cost houses after the Gujarat earthquake.

STEEL ROLLING MILL (BY INDUCTION FURNACE) [EIRI-1041]

The products of steel plants are in the form of structural shapes such as I-sections, channels, angles, plates, rails, sheets, axles and wheels for railways, merchant products lime rounds, hexagons, squares, strips etc. Galvanized sheets, tin-plates, wire-rods and soon. Rails, wheels and axles are specifically meant for railways which are a large consumer of steel. These are specifically used directly as supplied by steel plant. However, the remaining products of a steel plant, by and large, are processed further in engineering industries before their actual use. These products are therefore often called as 'Semis' meaning thereby that they are semi-finished steel products only.

Cost Estimation

Plant Capacity	350 MT./Day
Land & Building (50,000 sq.mt.)	Rs. 54.70 Cr.
Plant & Machinery	Rs. 5.77 Cr.
W.C. for 2 Months	Rs. 58.88 Cr.
Total Capital Investment	Rs. 120.06 Cr.
Rate of Return	49%
Break Even Point	42%

POLY ALUMINIUM CHLORIDE [EIRI-1018]

Aluminium chloride hydroxide [1327-41-9], [10284-64-7], AlCl (OH)₂ [14215-15-7], AlCl₂(OH), products, commonly known as polyaluminium chlorides (PAC), are used for a wide variety of industrial applications. Other names for PAC are basic aluminium chloride, polybasic aluminium chloride, aluminium hydroxychlorid, aluminium oxychloride and aluminium chlorohydrate. The presence of polymeric, aluminium-containing cations, the distribution of which can differ greatly, typifies PAC products. Although the formation of polynuclear aluminium species in solution has been studied for over a century, there is still much controversy concerning aluminium polymerization reactions and the resulting product compositions. Polyaluminium chloride is a partially hydrolyzed aluminium chloride solution, which may incorporate a small amount of sulphate, has been introduced in Japan, England and Australia as an alternative to alum. Known as poly(aluminium chloride) or poly (aluminium hydroxy chloride is a member of the family of basic aluminium chlorides. Polyaluminium chloride is also called Aluminium chloride Hydroxide [1327-11-9].

Cost Estimation

Plant Capacity	1.50 MT./Day
Land & Building (1000 sq.mt.)	US\$ 1.78 Lacs
Plant & Machinery	US\$ 1.40 Lacs
W.C. for 2 Months	US\$ 1.13 Lacs
Total Capital Investment	US\$ 4.56 Lacs
Rate of Return	25%
Break Even Point	61%

BOTTLING PLANT (COUNTRY LIQUOR) [EIRI-1233]

There are nevertheless several very early references which can be taken to indicate that a potable spirit (like country liquor) was known many thousands of years ago. The earliest regarding excessive consumption of potable distilled spirit, i.e. country liquor and other products, appear to have come from China, some 1000 years B.C. Aristotle later mentions purifying sea water by evaporation, and also "wine which produces a spirit". For centuries the art of distilling remained firmly in the hands of alchemists. Herbs had long been thought to cure various maladies, agriurduly for Jaundice, fox glore, for blisters and it would seem that the alchemists argued that, if the juice of one of these herbs could be, say, quadrupled in strength, then the efficiency of cure would be multiplied four fold. The alchemists were responsible for many improvements in the art of distilling.

Cost Estimation

Plant Capacity	10000 Ltrs./Day
Land & Building (1.52 Acres)	Rs. 2.11 Cr.
Plant & Machinery	Rs. 1.20 Cr.
W.C. for 1 Months	Rs. 1.31 Cr.
Total Capital Investment	Rs. 4.89 Cr.
Rate of Return	52%
Break Even Point	38%

Market Survey Cum Detailed Techno Economic Feasibility Reports

- To get Loan/Finance from Banks/Finacial Institutes.
- To set up your own Industry/Unit
- To have Detailed & Exhaustive Data on any Project.

* EIRI Project Reports are prepared by highly qualified & experienced consultants & Market Research and Analysis supported by a panel of Experts and Computerised.

* Data provided are reliable and uptodate collected from manufacturers/suppliers, plant already commissioned in India.

A complete List of Industrial Project Reports are given on www.eiribooksandprojectreports.com

EACH DETAILED PROJECT REPORT CONTAINS:

☛ **INTRODUCTION** : Project Mix, Uses & Applications, Quality Control Measure & Their Introduction for Attaining Required Properties Economy & Productivity Competence.

☛ **MARKET SURVEY** : Market Position, Installed Capacity Production, Anticipated Demand, Present Manufacturers, Statistics of Imports & Exports, Estimated Demand, Demand & Supply Gap (If available), LI/IL Issued Recently

☛ **PROCESS OF MANUFACTURE** : Inventory Controls & Tests, Comparative Study of Process for Manufacturing the Product, Formulations, Process Flow Sheet Diagram, Process Detail in Stages from Raw Materials to Finished Products

☛ **RAW MATERIALS** : Raw Material Specifications, Market Codes & Raw Material Prices, Sources of Procurement of Raw Materials [Imported/Indigenous]

☛ **PLANT & MACHINERY** : Range of Machineries Required, Detailed Specifications of Machines & Equipments, Prices of Machineries, Suppliers of Plant and Machineries.

☛ **LAND & BUILDING** : Total Land Area Requirement with Rates, Covered Area Break-up with Estimated Costs of Construction

☛ **PROJECT ECONOMICS** : Land & buildings, Plant, Machinery & Other Fixed Assets, Total Capital Investment, Working Capital Assessment, Raw Material & Consumable Stores, Staff Salaries & Wages, Utilities & Overheads, Total Cost of Project, Sources of Finance/Refinance, Break Even Point Determination.

For assessing Market Potential, Corporate Diversifications, Planning, Investment Decision Making and to start your own setup, Entrepreneurs and Industrialists are most welcome to contact EIRI.

EIRI Technocrats and Engineers have just prepared
“MARKET SURVEY CUM DETAILED TECHNO ECONOMIC FEASIBILITY REPORTS”
 on following lucrative products which are most viable and profitable and having bright future scope

* COPPER SULPHATE FROM COPPER ASH/SCRAP CHELATED ZINC (ZN-EDTA) 12%
 * ORTHOPAEDIC IMPLANTS AND INSTRUMENTS
 BARLEY MALT
 * MINERAL TURPENTINE OIL (M.T.O.) FROM PETROLEUM (SUPERIOR KEROSENE OIL OR OTHER MATERIAL)
 * M.S.FASTENERS AND S.S. FASTENERS
 * P.V.C. COMPOUNDING (FRESH) FOR CABLES AND PVC PIPES
 * BANANA FIBRE EXTRACTION AND HAND MADE PAPER BANANA & ITS BY PRODUCTS
 * COLOUR AND ADDITIVES MASTERBATCHES
 * METALLIC STEARATE
 * SURGICAL METHYLATED SPIRIT
 * KHADSARI SUGAR (500 TCD)
 * COTTON (RUI) FROM WASTE

COTTON CLOTH
 * LAUNDRY & DRY CLEANERS
 * COATED YARN
 * TOUGHENED GLASS
 * CAUSTIC SODA (SODIUM HYDROXIDE) (NaOH) ELECTROLYTIC PROCESS
 * PLASTIC WASTE RECYCLING UNIT & PYROLYSIS PLANT FROM PLASTIC AND RUBBER WASTE (INTEGRATED UNIT)
 * CHITIN & CHITOSAN FROM PRAWN SHELL WASTE
 * PASTA PRODUCTION PLANT (SHORT PASTA)
 * SODIUM HYDRO SULFITE THROUGH FORMALDEHYDE ROUTE CAP-20 TPD
 * SODA ASH PLANT FROM SOLVAY PROCESS
 * ONION, AND GARLIC POWDER WITH GRAPE DEHYDRATION (RAISINS)
 * FLUSH DOORS
 * DI-METHYL PHTHALATES (DMP)
 * GLUTEN FREE BEER

* PVC AND PP FILES AND FOLDERS
 * SULFAMIC ACID PURE CRYSTAL AND OTHER GRADE (GP,SR & TM GRADE)
 * DECORATIVE LAMINATED SHEET (SUNMICA)
 * ALPHA CELLULOSE POWDER FROM COTTON WASTE
 * CAST POLY PROPYLENE FILMS (CPP FILM)
 * CASHEW NUT PROCESSING
 * BIOGAS PRODUCTION (1500 CUBIC METER PER DAY)
 * SOYA MILK AND PANEER
 * MINERAL TURPENTINE OIL (MTO)

EIRI is an expert Industrial Consultant working over 35 years and specialized to prepare all types of Detailed Project Reports based on clients requirements. Do Contact Today at: eiritechnology@gmail.com

LIST OF THE READY AVAILABLE E-BOOKS BY EIRI. CONTACT AT eiribooks@yahoo.com for price

01. Adhesive Technology and formulations hand book (Hand Book of Adhesives)	Essential Oils	on Home & Small Scale Industries
02. Agro Based & Processed food Prd.	36. Technology of PVC Compounding and Its Applications	69. Technology of Reinforced Plastics
03. Agro food Processing & Packaging	37. Technology of Rubber & Rubber Goods Industries	70. Rotational Moulding Technology Hand Book
04. Aloe Vera Cultivation, Processings, Formulations & Manufacturing Tech.	38. Technology of Sweets (Mithai) with Formulae	71. Modern Technology of Tomato Processing and Dehydration- Ketchup, Juice, Paste, Puree, Soup and Drying
05. Complete Book on Banana Cultivation, Dehydration, Ripening, Processing, Products & Packaging	39. Technology of Synthetic Dyes, Pigments & Intermediates	72. Complete Technology of Nonwovens-Fabrics, Carrybags, Composites, Geotextiles, Medical Textiles, Fibres, Felts, Apparels, Spunlace & Absorbent Nonwovens
06. Citrus Fruits cultivation & Processing	40. Technology of Oilseeds Processing, Oils & Fats and Refining	73. Technology of Soybean Products with Formulae
07. Commercial Dairy farming to produce milk with project profiles	41. Textile Auxiliaries and Chemicals with Processes & Formulations	74. Modern Technology of Agro Processing and Food Packaging Products with Project Profiles
08. Complete Handbook on frozen food processing & freeze drying technology	42. Hand book of Offset Printing Technology, Pre-Press, Plate Making, Web Offset, Newspaper Production	75. Technology of Soya Milk, Tofu, Hydrolyzate, allied Soyabean Products with Project Profiles
09. Dairy farming for milk production	43. Hand Book of Organic Farming & Organic Foods with Vermi-Composting and Neem Products	76. Products from Waste Technology Handbook
10. Technology of Synthetic Resin & Emulsion Polymers	44. Hand Book of Packaging Technology	77. Food Additives, Sweeteners
11. Floriculture Hand Book (Hand book of flowers growing technology)	45. Hand Book of Plastic Materials and Processing Technology	78. Technology of Food Chemicals, Pigments and Food Aroma Compounds
12. Fruit Beverages and Processing with Mango Products	46. Hand Book of Poultry Farming & Feed Formulations	79. Technology of Glue and Adhesives with Adhesives Bonding and Formulations
13. Modern Technology of Printing Inks	47. Hand Book of Prepress	80. Coffee Processing Hand Book
14. H. B. of Biofertilizers & Vermiculture	48. Hand Book of Spices & Packaging with Formulaes	81. Casting Technology HandBook
15. H. B. of Adhesives with formulaes	49. Hand Book of Ceramics & Ceramics Processing Technology	82. Powder Coating Technology Hand Book
16. Hand Book of Aromatic & Medicinal plants and Biodiesel (Jatropha)	50. Injection Moulding of Plastics	83. Poultry Farming, Hatchery and Broiler Production
17. Hand Book of Ayurvedic Medicines with formulations	51. Manufacture of Snacks Food, Namkeen, Pappad & Potato Products	84. Technology of Wine Production and Packaging
18. Hand Book of dairy farming to produce milk with packaging	52. Manufacturing Technology of Non-Ferrous Metal Products	85. Modern Technology of Bioprocessing (Fermentation, Food, Enzyme, Pharmaceutical, Industrial, Agricultural and Energy)
19. Hand Book of Electroplating Anodizing & Surface finishing technology	53. Technology of Chicken Meat and Poultry Products	86. Profitable Small Scale Manufacture of Cosmetics (Synthetic/Herbal)
20. Hand Book of Flavours Technology	54. Meat Processing & Meat Products H.B.	87. Technology of Herbal Cosmetics and Toiletries Products with Formulae
21. H.B. of Food Dehydration & Drying	55. Technology of Water & Packaged Drinking Water	88. Tech of Maize & Allied Corn Products
22. Hand Book of Garments Manufacturing Technology	56. Modern Technology of Frozen Food Products	89. Complete Hand Book on Adhesives and Adhesion Technology with Project Profiles
23. Hand Book of Goat Farming	57. Modern Technology of Non-Ferrous Metals and Metal Extraction	90. Hand Book of Tree Farming
24. Hand Book of Ice Cream Technology and formulae	58. Modern Bakery Tech. & Fermented Cereal Products with Formulae	91. Hand Book of Pig Farming
25. Hand Book of Lubricants, Greases and Petrochemicals Technology	59. Modern Bee Keeping and Honey Processing Technology	92. Technology of Paints and Coatings with Formulations
26. Hand Book of Medicinal and Aromatic Plant Cultivation, Utilisation & Extraction Processes	60. Modern Technology of Acid Slurry, Surfactants, Soap and Detergents with formulae	93. E-Book Formulations on Nail Enamel & Nail Polish Removers
27. Hand Book of Mushroom Cultivation, Processing and Packaging	61. Modern Technology of Extrusion & Extruded Products	94. E-Book Formulations on Herbal Hair Oils & Hair Lotions, Hair Vitalizer, Hair Styling Gel & Afro Products
28. Technology of Reinforced Plastics	62. Modern Technology of Rolling Mill, Billets, Steel Wire, Galvanized Sheet, Forging and Castings	95. E-Book on Herbal Cold Cream, Moisturizing Cream with Aloe vera & Fairness Creams
29. Rotational Moulding Technology	63. Technology of Pet Bottles, Preform and Pet Recycling	
30. Technology of Sweets, Namkeen and Snacks Food with Formulae	64. Plastic Additives Technology Hand Book	
31. Technology of Coatings, Resins, Pigments & Inks Industries	65. Plastic Waste Recycling Technology	
32. Technology of Confectionery, Chocolates, Toffee, Candy, Chewing & Bubble Gums, Lollipop and Jelly products with formulations	66. Potato & Potato Processing Technology	
33. Technology of Food Preservation and Processing Canning, Fermented Beverages, Fruit Concentrates, Pickles, Cold Storage & Fermented Alcoholic and Non-Alcoholic Beverages	67. Profitable Businesses to Start for Entrepreneurs	
34. Tech. of Food Processing Industries	68. Profitable Small, Cottage, Tiny and Home Industries A complete handbook	
35. Technology of Perfumes, Flavours and
