

# JUST PREPARED NEW PROJECTS FOR YOU

## WIRE NAILS [CODE NO.1891]

Wire nail are used to join many things in industries and in other domestic items. The are made of hard carbon wire. They are headed on one end and sharp at another end. The head is used for hammering and sharp end help in penetrating into the object which is to be joined. WIRE nail is one hardware that is used mainly in Building construction work, manufacturing boxes for packing etc. due to the increasing population and the necessities attached to it, they are always in demand in the market join small items.

### COST ESTIMATION

Plant Capacity	2.00 MT./day
Land & Building (250 Sq.Mtr)	Rs. 30.00 Lacs
Plant & Machinery	Rs. 20.45 Lacs
W.C. for 2 Months	Rs. 54.25 Lacs
Total Capital Investment	Rs. 1.08 Cr
Rate of Return	40%
Break Even Point	54%

## AMUSEMENT PARK CUM WATER PARK (CODE NO.1892)

A water park is an amusement park that features water play areas, such as water slides, splash pads, spray grounds (water playgrounds), lazy rivers, or other recreational bathing, swimming, and bare footing environments. Water parks in more current states of development may also be equipped with some type of artificial surfing or body boarding environment such as a wave pool or Flow Rider. The Human life in cities is becoming more and more mechanical because of noise pollution, environment pollution for relaxed and peaceful environment, where leisure along with children and family. There are various sources of entertainment like cinema, circus, tourist spots, videogame, orchestra etc. Amusement park is the most popular entertaining place with the latest technological developments, which gives comfort, pleasure.

### COST ESTIMATION

Land & Building (10 Acres)	Rs. 9.46 Cr
Plant & Machinery	Rs. 5.96 Cr
W.C. for 1 Month	Rs. 20.51 Lacs
Total Capital Investment	Rs. 16.62 Cr
Rate of Return	8%
Break Even Point	78%

## RE-BAR STEEL [CODE NO.1893]

A steel bar, usually with manufactured deformations used in concrete and masonry construction to provide additional strength is called re-bar. Reinforcing bar, or rebar, is a common steel bar that is hot rolled and is used widely in the construction industry, especially for concrete reinforcement. Steel rebar is most commonly used as a tensioning devise to reinforce concrete and other masonry structures to help hold the concrete in a compressed state. Concrete is a material that is very strong in compression, but virtually without strength in tension. To compensate for

(RTGS/NEFT/IFSC Code: ICIC0000387)

this imbalance in a concrete slab's behavior, reinforcement bar is cast into it to carry the tensile loads.

### COST ESTIMATION (US\$)

Plant Capacity	500.00 MT./day
Land & Building (12000 Sq.Mtr)	US\$ 11.99 Th
Plant & Machinery	US\$ 21.66 Th
W.C. for 2 Months	US\$ 1.53 Cr
Total Capital Investment	US\$ 1.90 Cr
Rate of Return	52%
Break Even Point	27%

## OXYGEN PLANT 200 TONS PER MONTH CAPACITY [CODE NO.1895]

Oxygen, the gaseous element that constitutes 20.946% of the earth's, atmosphere, is essential to respiration and life in all animals and to most forms of vegetation. Oxygen supports the combustion of fuels which supply mankind with heat, light and power, and it enters into oxidative Combination with many materials. The speed of reaction and effectiveness of combination increases with oxygen concentrations greater than that of air. Industry has established 99.5% purity for the bulk commercial product. The great importance of the industrial gas, oxygen is due to the usefulness of the acetylene torch for steel welding and steel cutting, and for the welding of other metals, to lesser degree to the oxyhydrogen flame. Oxygen gas in the breathing apparatus for a visitors at high altitudes and for oxygentents in hospitals is a high altitudes and for oxygentents in hospitals is a more recent development.

### COST ESTIMATION

Plant Capacity	8.00 MT/day
Land & Building (2 Acres)	Rs. 4.25 Cr
Plant & Machinery	Rs. 4.00 Cr
W.C. for 3 Months	Rs. 91.72 Lacs
Total Capital Investment	Rs. 12.51 Cr
Rate of Return	15%
Break Even Point	67%

## LARGE MULTIPURPOSE (MEAT, FISH, VEGETABLES AND FRUITS) COLD STORAGE PLANT OF A CAPACITY APPROX. 2000 MT. [CODE NO 1896]

All fruits and vegetables require specialized post harvest treatment, appropriate temperature and relative humidity for their storage. Establishment of cold storage provides refrigerated storage and preservation facilities for several fruits, vegetables & flowers. Because of technology advancements and logistic strategies, the cold storage of perishable items has become an important stage in the distribution between manufacturers/ processors and retail locations. The cold storage will ensure the increased availability and improved quality of high value perishable fruits and vegetables for both export and local sale, which would otherwise perish or deteriorate. This project is designed for storing of potatoes and apples/ kinnu etc. but

it can be used to store multiple products, stored in different compartments of the unit, where relative temperatures for respective products can be maintained. The major clientele of this business will be the export houses and the local trading and marketing units of potato and apple/ kinnu. The project will further aim at storing fruits & vegetables even during off-seasons. The project will ultimately assist the clientele in maintaining market price equilibrium throughout the year for potatoes.

### COST ESTIMATION

Plant Capacity	2000 MT.
Land & Building (5000 Sq.Mtr)	Rs. 4.39 Cr
Plant & Machinery	Rs. 1.96 Cr
W.C. for 1 Month	Rs. 10.77 Lacs
Total Capital Investment	Rs. 6.62 Cr
Rate of Return	18%
Break Even Point	59 %

## COPPER POWDER BY ELECTROLYTIC PROCESS [CODE NO.1897]

Copper Powder is the basic raw material for many of the sintered products. These products find their uses in aircrafts, space crafts, parts for guns, porous metal bearings, filter gas diffusers, welding rods, bimetallic strips and electrical parts. The usage of copper powder has increased manifold by virtue of its physical properties, long life high scrap value and wide range of uses. Next to iron and steel, it is widely used in the market.

### COST ESTIMATION

Plant Capacity	3.50 MT/day
Land & Building (2000 Sq.Mtr)	Rs. 1.92 Cr
Plant & Machinery	Rs. 47.00 IACS
W.C. for 2 Months	Rs. 9.40 Cr
Total Capital Investment	Rs. 11.94 Cr
Rate of Return	74%
Break Even Point	24%

## CORRUGATED BOARD AND BOXES (AUTOMATIC PLANT) (USING CHINA MACHINES) [CODE NO.1898]

The materials now available for packaging are paper and paper products, metal containers and foils, glass, plastics-rigid and flexible, cellulosic films, textiles including jute, woven plastics and wood. Among the packaging materials, paper and paper based products continue to occupy a predominant place. Paper based materials used for packaging include bleached and unbleached kraft, corrugated and solid fiber boards and a large variety of converted items like wax coated, plastic coated, bitumen coated etc. Corrugated and solid fibre board boxes have replaced the conventional wooden boxes as transport containers because of their light weight and satisfactory strength. There are, however, several areas in which this sector is lagging behind the developed countries; they include mainly production of parchment paper for use in packaging of biscuits etc. Sack Kraft paper and high strength Kraft for producing corrugated fibre board of good strength characteristics. Packaging has been

assuming importance in the context of growth of industries in general and consumer industries in particular. Paper is one of the most important materials that enters packaging. Paper is extensively used for making boxes, bags, sealing tapes, drums and tubes and as cushioning materials. Paper makers in the country are becoming conscious of the needs of container industry and are working to improve the existing qualities. In India textile, tea, tobacco and coffee are probably the largest consumers of papers. Out of the total paper production about 35 per cent goes to the packaging industry. With the advancement of industry, the production of paper and paper board is bound to increase, and the major increase will be in the field of packaging papers and boards. Paper is intact replacing the older materials used for packaging. In addition, paper

## Top Industries to Start

in packaging is economical; light easy to handle and superior. Corrugated boxes and solid fibre containers are extensively being used in place of wooden boxes.

### MAIZE PROCESSING PLANT (300 Ton/Day) [CODE NO. 1605]

Starch is an abundant carbohydrate distributed worldwide in plants. Starch has been a major ingredient in man's diet over the centuries. In addition it has become a major industrial raw material. Plant seeds, roots and tubers are all sources of industrial starch production. The commercial realities of the starch recovery process limit the industrial sources mainly to wheat, maize and tapioca. Indian starch industry mainly consumes maize as input raw material.

### COST ESTIMATION

Plant Capacity	300 Ton Maize/Day
Land & Building (20 Acres)	Rs.21.87 Cr
Plant & Machinery	Rs. 64.55 Cr
W.C. for 2 Months	Rs. 26.07 Cr
Total Capital Investment	Rs. 1.13 Arab

### TMT ROLLING MILL [CODE NO. 1900]

The full form of TMT is Thermo Mechanical Treatment; in this the steel bars are passed through a specially designed water-cooling system. After the bars pass, the outer surface of the bars solidifies while the core remains hot. This creates a temperature gradient in the bars. After the intensive cooling, the bar is exposed to air and the core re-heats the quenched surface layer by conduction, therefore tempering the external marten site. When the bars are taken out of the cooling system, the heat flows from the core to the outer surface, further tempering of the bars, which helps them attain higher yield strength. The resulting heat-treated structure imparts superior strength and toughness to the bars. Cooling process is illustrated below: The pre-determined cooling of the bar periphery transforms the peripheral structure to marten site and then annealed through the heat available at the core. The peripheral and core temperature difference finally equalizes at around 600 degree C and the resultant bar structure is of tempered marten site at the periphery and of fine-grained ferritepearlite at the core. Generally speaking, the resultant soft core forms about 65-75 per cent of the area (depending upon the desired minimum yield strength) and the rest is the hardened periphery. The equalizing temperature together with the final rolling temperature is the most

important parameter to achieve the required mechanical properties. Finally, when the bar is discharged on to the Cooling Beds, the remaining austenite transforms into a very fine-grained pearlite structure. After this process of thermo mechanical treatment, a dark etched peripheral rim of tempered marten site and a grey core of ferrite pearlite get formed. The tempered marten site surface layer is very hard while the microstructure of the core is a very fine-grained ferrite and pearlite which is quite soft. The result is a structure with high yield strength combined with high ductility. Hence from the above data it is seen that the sudden quenching is the key role in hardening the steel bars. The pressure of the water jets on the hot molten bars determines the thickness of the martenite structure and is controlled for the required hardness.

### PVC SOLVENT CEMENTS (uPVC & cPVC) [CODE NO. 1901]

The operation of solvent cement may be broadly defined as the formation of a Joint where in a self bond between two polymeric component is promoted by the presence of a solvent in temporarily high concentration. The union between two parts of a Joint is brought with the aid of solvents, solvent cement or adhesives. The type of joint best suited to solvent bonding is a lap joint. The nutuod in not normally used for but. Joint where these are likely to experience significant stresses. The essential features of bond formation in this method are the intes diffusion of polymer molecules across the original interface between the two components of the joint, and the promotion and acceleration of this process by the swelling of the polymer of the joint components at the clubface, caused by sorption of the solvent. The solvent concentration in the polymer, originally high, is ultimately reduced to a lord constant value mainly the further penetration inwards and also by evaporation from the edges of the bond zone.

## BARLEY MALT [EIRI-1607]

Malt is germinated cereal grains that have been dried in a process known as "malting". The grains are made to germinate by soaking in water, and are then halted from germinating further by drying with hot air. Malting grains develops the enzymes required to modify the grain's starches into sugars, including the monosaccharide glucose, the disaccharide maltose, the trisaccharide maltotriose, and higher sugars called maltodextrins. It also develops other enzymes, such as proteases, which break down the proteins in the grain into forms that can be used by yeast.

## ORTHOPAEDIC IMPLANTS AND INSTRUMENTS [EIRI-1606]

Orthopedic implants can be defined as medical devices used to replace or provide fixation of bone or to replace articulating surfaces of a joint. In simpler words, orthopedic implants are used to replace damaged or troubled joints. The implant surgeries are performed only by highly specialized and trained surgeons. The surgical procedures for each implant involves removal of the damaged joint and an artificial prosthesis replacement.

### Cost Estimation

Land & Building (1000 sq.mt.)	Rs. 3.25 Cr.

## MAIZE PROCESSING PLANT (Starches / Modified starches/ Liquid glucose / Dextrose Monohydrate / Glucose Syrups / Corn Syrup solids / High Maltose Corn syrups / Malt Dextrine Powder / Corn Gluten Meal (60%) Maize Oil / Sorbitol)

[EIRI-1605]

Starch is an abundant carbohydrate distributed worldwide in plants. Starch has been a major ingredient in man's diet over the centuries. Maize starch is produced by the wet milling process, which involves grinding of softened maize and separation of corn oil seeds (germs), gluten (proteins), fibers (husk) and finally pure starch.

## TMT STEEL BARS [EIRI-1604]

Thermo mechanically treated (TMT) steel, can be described as a new-generation-high-strength steel having superior properties such as weldability, strength, ductility and tensility, which meet the highest international quality standards. Under thermo mechanical treatment (TMT), the steel bars are passed through a specially designed water-cooling system where they are kept till the outer surface of the bars becomes colder while the core remains hot. This creates a temperature gradient in the bars. When the bars are taken out of the cooling system, the heat flows from the core to the outer surface, further tempering of the bars, which helps them attain a higher yield strength. The resulting heat-treated structure imparts superior strength and toughness to the bars. The microstructure of the core is a very fine-grained ferrite and pearlite. TMT bars are also known as 'quenched and tempered rebars' because of the quenching and tempering processes involved in making the bars. The production of quality TMT bar depends on three major factors - quality raw materials, a properly designed and automated mill and a well-designed quenching and tempering technology. All rebars must be purchased based on the properties of yield strength, tensile strength and elongation values.

### Cost Estimation

Plant Capacity	100 MT./Day

## CHELATED ZINC (ZN-EDTA) (12%) [EIRI-1603]

Zinc EDTA is a derivative of Ethylene diamine Tetra acetic Acid. Ethylene diamine Tetra acetic Acid is a Sequestering/Chelating Agent. EDTA is a synthetic amino acid. It is widely known as EDTA. It is a white powder. EDTA Acid is insoluble in water. It is also named as Ethylene diamine Tetra acetate. It is widely used to dissolve Metallic Impurities. There are various Salts/ Derivatives of EDTA. EDTA is widely recognized as effective Sequestering Agent. EDTA grabs metallic cation such as Lead or Calcium from the process and forms a stable compound that is then excreted from the system. The stability of this bond is vital to get the success in removing the inorganic impurities out of the system. If the bond is weak, other chemicals can break this bond to form their own compounds.

# Start Your Own Industry

## COPPER SULPHATE FROM COPPER ASH/SCRAP

[EIRI-1602]

Copper sulphate is a well known compound of copper. The commercial name of this compound is Blue Vitriol. Blue stone or chalcantihite. Copper sulphate is used in copper plating, as a mordant in dyeing, as a laboratory reagent, in electric batteries, in production of others salts, as germicide and insecticide in leather industry pulp in pigments in the preservation of wood, pulp and ground pulp in the process of engraving and lithography in ore flotation, destroying large and low roms of animal life from drinking water, in petroleum industry synthetic rubber, steel manufacture etc. Various forms of copper sulphate are available in the market are present. These forms are classified according to this water if crystallization of copper sulphate anhydrous copper sulphate is blue coloured powder. From commercial point of view copper sulphate has the great importance of all copper chemicals based on tonnage alone.

## GREASE MANUFACTURING [EIRI-1600]

These consist of a dispersion of a metallic soap in a lubricating oil and vary from mobile ligands to hard solids. Sodium or Calcium soaps are more commonly employed but for special purposes aluminium or lithium soaps are used. Greases are used for lubricating bearings and other moving parts where lube oil would be unsuitable. Primary components of greases are mineral oils & soaps. The oil consists of varying proportions of paraffinic naphthenic and aromatic hydrocarbon. Soaps used in grease may be derived from animal or vegetable oils or fatty acids, wool grease, resin or petroleum acids. apart from this variety of other compounds are added to lubricating greases to improve specific properties. such components are corrosion and rust inhibitor, and wear prevention agents. a grease thus produced is properly thicked in order that it remains in contact with the moving surfaces and does not leak out under pressure. Grease acts as a seal against dirt, dripping and spattering is eliminated, minimizes starting frictions.

### Cost Estimation

Plant Capacity	1 MT./Day
Land & Building (1000 sq.mt.)	Rs. 1.50 Cr.

# Top Industries to Start

## DISPOSABLE SYRINGES & NEEDLE PLANT (SINGLE USE SYRINGES, SINGLE USE NEEDLES & AS SYRINGES) [EIRI-1553]

Disposable Plastic Syringes are being used by doctors to inject medicines through Intravenous or intramuscular ways for the treatment of diseases & also by research & development personnel. Disposable syringes are made of plastic material and are used in the field of medical and veterinary science. Due to their availability in sterilized condition, ready to use, and cost effectiveness, disposable syringes are fast replacing the age old glass syringes. Moreover, the horror of AIDS worldwide has almost dispensed with the reuse of syringes and the demand of disposable syringes has increased phenomenally. Disposable syringes are mostly injection moulded from polypropylene. Syringes are available in sizes of 1 ml, 2 ml, 5ml and 10ml, 50ml in a variety of designs and consist of either two or three components construction.

### Cost Estimation

Cap.	8,75,000 Nos. Syringes (2ml-5ml)/Month
	3,75,000 Nos. Syringes (20-30ml)/Month
	2,50,000 Nos. Dis. Needle/Month
Land & Building (1500 sq.mt.)	Rs. 2.12 Cr.
Plant & Machinery	Rs. 1.62 Cr.
W.C. for 3 Months	Rs. 1.60 Cr.
Total Capital Investment	Rs. 5.57 Cr.
Rate of Return	22%
Break Even Point	62%

## P.V.C. BATTERY SEPARATOR [EIRI-1552]

Amongst the various systems and devices that are available for converting electrical energy to some form of storage energy for reconversion to electrical energy, lead storage battery is the most effective system available. The use of storage batteries is far and wide, and mainly in the field of automobile, telephone exchange, submarines, aircrafts etc. Before 1946, most separators used in storage batteries were of wood and since then, these have been replaced either by PVC or microporous rubber which are highly suitable. Sintered microporous PVC battery separators are the separators used in the storage batteries all over the world for enhancing the life and quality of the battery. The function of a separator is to isolate the positive and negative plates in a battery by providing a perfect insulation, these preventing short circuit in them. At the same time the separators function as a permeable membrane so as to effect circulation of the electrolytes for the chemical reactions and free ionic flow.

### Cost Estimation

Plant Capacity	50,000 Nos/Day
Land & Building (1500 sq.mt.)	Rs. 1.29 Cr.
Plant & Machinery	Rs. 60 Lacs
W.C. for 2 Months	Rs. 51 Lacs
Total Capital Investment	Rs. 2.71 Cr.
Rate of Return	31%
Break Even Point	57%

## GLASS BOTTLE FOR BEER AND BEER MUG (TUMBLER) [EIRI-1551]

Glass is one of man's most valuable and versatile materials. About 700 different glass compositions are in commercial use. These are fabricated into tens of thousand of different articles that have combinations of properties for about a thousand essentially different uses. Glass ware manufacturing occupies an important role in the glass manufacturing industry.

### Cost Estimation

Plant Capacity	25 MT./Day
Land & Building (6000 sq.mt.)	Rs. 8.05 Cr.
Plant & Machinery	Rs. 3.16 Cr.
W.C. for 3 Months	Rs. 2.31 Cr.
Total Capital Investment	Rs. 13.93 Cr.
Rate of Return	32%
Break Even Point	49%

## ALUMINIUM ALLOY PLANT [EIRI-1550]

Aluminium alloys are alloys in which aluminium (Al) is the predominant metal. The typical alloying elements are copper, magnesium, manganese, silicon and zinc. There are two principal classifications, namely casting alloys and wrought alloys, both of which are further subdivided into the categories heat-treatable and non-heat-treatable. About 85% of aluminium is used for wrought products, for example rolled plate, foils and extrusions. Cast aluminium alloys yield cost-effective products due to the low melting point, although they generally have lower tensile strengths than wrought alloys.

### Cost Estimation

Plant Capacity	100 MT./Day
Land & Building (2500 sq.mt.)	US\$ 3.24 Th.
Plant & Machinery	US\$ 3.44 Th.
W.C. for 2 Months	US\$ 1.03 Cr.
Total Capital Investment	US\$ 1.10 Cr.
Rate of Return	101%
Break Even Point	20%

## KRAFT PAPER USING WASTE PAPER & OLD CORRUGATED CARTONS [EIRI-1549]

Paper form a commodity of prime importance to day from the parts of view of mass communication, education and industrial and economic growth. The art of paper making was first discovered in China in and around 2nd century. B.C. pan where it travelled slowly west ward and reached the prantiens of Europe. By the end of 14th century, a member of paper mill existed in Europe, particularly in Spain, Italy, France and Germany. the invention of printing in 1956 brought a vastly in creased demand for paper, and paper-manufacturing was introduced to England. America followed in 1690. Agricultural residues, such as bagasse, rice husk, wheat husk jute sticks, grasses, etc are fast becoming popular materials for paper making. considerable attention is being given to the utilization of various agricultural by

products for preparing pulp for paper manufacture landable efforts are being make in this direction. Paper production requires a disintegration of the bulky fibrous material to individual or small agglomerate fibres.

### Cost Estimation (Rupees in Lacs)

Plant Capacity	100 MT/Day
Land & Building (16 Acres)	Rs. 3,195 Lacs
Plant & Machinery	Rs. 5,100 Lacs
W.C. for 3 Months	Rs. 2,442 Lacs
Total Capital Investment	Rs. 11,051 Lacs
Rate of Return	36%
Break Even Point	49%

## WALNUT PROCESSING PLANT [EIRI-1548]

A walnut is an edible seed of any tree of the genus Juglans, especially the Persian alnut, Juglans regia. Broken nutmeats of the eastern black walnut, from the tree Juglans nigra, are also commercially available in small quantities, as are foods prepared with butternut nutmeats. Walnut seeds are high density source of nutrients, particularly proteins and essential fatty acids. Walnut seeds, like other tree nuts, must be processed and stored properly. Poor storage makes walnut seeds susceptible to insect and fungal mold infestations; the latter produces aflatoxin - a potent carcinogen. Mold infested walnut seed batch should not be screened then consumed; the entire batch should be discarded. In certain parts of the world, walnuts are locally known as wainlsse, noix, nuz, nuc, akhar, kurumi.

### Cost Estimation

Plant Capacity	15 Tons/Day
Land & Building (2 Acres)	Rs. 2.10 Cr.
Plant & Machinery	Rs. 2.31 Cr.
W.C. for 1 Months	Rs. 19.53 Cr.
Total Capital Investment	Rs. 24.31 Cr.
Rate of Return	57%
Break Even Point	28%

## SOY AND GLUTEN BASED MOCK MEAT [EIRI-1547]

Golden palaces of mock meat. Most towns have one; if you don't know where it is, ask your local vegan or vegetarian. Staples in many vegetarian and vegan diets, meat analogs are food products that look, feel and taste like meat from an animal. Analogs blend plant-based proteins with flavoring, fat and coloring to replicate beef, poultry or seafood, and in some cases are used as filler in meat. These meatless morsels are often made of wheat gluten (also called seitan). Gluten is the protein produced when combining wheat's two major proteins, gliadin and gluten in, with water or milk through the process of kneading.

### Cost Estimation

Plant Capacity	5 Tons/Day
Land & Building (Area 1.5 Acre)	Rs. 3.90 Cr.
Plant & Machinery	Rs. 7.80 Cr.
W.C. for 1 Months	Rs. 2.36 Cr.
Total Capital Investment	Rs. 14.53 Cr.
Rate of Return	57%
Break Even Point	37%

## Best Industries to Start and Grow

### STAINLESS STEEL SINKS [EIRI-1546]

Stainless Steel Kitchen Sinks as the name suggests are made of stainless steel. Sinks are the vessels used in houses and hotels, restaurants for cleaning dirty utensils, used for cooking, serving tea and coffee etc. and eating meals, break fasts, refreshments need to be anti-rust and strong, and hence are made of stainless steel. The sinks are used where the utensils carry lot of fat and other sticky substances on the surfaces and require full dealing with detergents.

#### Cost Estimation

Plant Capacity	200 Nos/Day
Land & Building (450 sq.mt.)	Rs. 74 Lacs
Plant & Machinery	Rs. 52 Lacs
W.C. for 2 Months	Rs. 2.09 Cr.
Total Capital Investment	Rs. 3.54 Cr.
Rate of Return	38%
Break Even Point	51%

### FASTENERS (NUTS & BOLTS) USED IN OIL AND GAS [EIRI-1545]

Nuts and Bolts are most commonly used items in the family of industrial fasteners and their demand is fast increasing due to expansion of industries in the country. Bolt is a piece of metal rod whose one end is upset and at the other end threading is done. Nut is a device which rolls on bolt threads. In nuts, internal threading is done while bolts bear external thread. Screw, demonstrate their true merit in the movements, assembly etc, of wooden components. Screws are most popular as fasteners which assemble, or join parts together to be made into a complete unit. Nuts and Bolts are available in various sizes and shapes.

#### Cost Estimation

Plant Capacity	13.33 MT./Day
Land & Building (4000 sq.mt.)	US\$ 2.18 Lacs
Plant & Machinery	US\$ 3.45 Lacs
W.C. for 2 Months	US\$ 6.84 Lacs
Total Capital Investment	Rs. 13.10 Lacs
Rate of Return	76%
Break Even Point	43%

### CURCUMIN & TURMERIC OIL FROM TURMERIC [EIRI-1049]

Turmeric (*Curcuma longa*) is a native of Asia & India. The tuberous rhizome or underground stem of turmeric are used from antiquity as condiments. A dye and as an aromatic stimulants in several medicines.

#### Cost Estimation

Plant Capacity	500 KGS/Day
Land & Building (4000 sq.mt.)	Rs. 3.13 Cr.
Plant & Machinery	Rs. 3.13 Cr.
W.C. for 3 Months	Rs. 10.75 Cr.
Total Capital Investment	Rs. 17.42 Cr.
Rate of Return	71%

### CASTOR OIL DERIVATIVE OLEO RESIN [EIRI-1068]

Castor oil obtained by a combination of pressing and extraction from the seeds of the castor oil plant (*Ricinus communis*) consists of upto 90% of triglyceride of ricinoleic acid, 12 hydroxy oleic acid. The hydroxyl number of castor oil is 161-169. The component glycerides of castor oil (%mole) comprise saturated-diricinoleins (7.3%) oleo-diricinoleins (2.5%) Linoleo diricinoleins (13.4%), Dihydroxy Stearo diricinoleins (2%) Triricinolein (74.8%). More important the non-drying ricinoleic acid in the castor oil can be dehydrated to give a drying oil i.e. dehydrated castor oil. This drying oil is formed by heating castor oil under reduced pressure of 240-260°C in the pressure of 0.1-0.2 wt.% of an acid catalyst e.g. H<sub>2</sub>SO<sub>4</sub>, phosphoric acid, or acidic salts with the elimination of water from ricinoleic acid, yielding a mixture of 9,11 and 9,12 octadecadienoic acids, called dehydrated castor oil acid.

#### Cost Estimation

Plant Capacity	20 MT./Day
Land & Building (3000 sq.mt.)	Rs. 1.96 Cr.
Plant & Machinery	Rs. 88 Lacs
W.C. for 2 Months	Rs. 7.61 Cr.
Total Capital Investment	Rs. 10.66 Cr.
Rate of Return	76%
Break Even Point	25%

### TURMERIC OIL EXTRACTION FROM DRY TURMERIC [EIRI-1153]

The main products in a spice oleoresin plant are oleoresins of chilli, pepper, ginger and turmeric. The co-products are corresponding spice oils, which are widely used in food and pharmaceutical industries. Spent meals of spice powders after oleoresin extraction are by-products and are devoid of essential oils, pungent principles, fixed oils and resinous matter for which the spices are valued. This may be considered for incorporation in animal feed formulations, as spent meal is rich in carbohydrate and cellulose.

#### Cost Estimation

Plant Capacity	150 KGS/Day
Land & Building (1000 sq.mt.)	Rs. 1.10 Cr.
Plant & Machinery	Rs. 64 Lacs
W.C. for 2 Months	Rs. 1.30 Cr.
Total Capital Investment	Rs. 3.19 Cr.
Rate of Return	36%
Break Even Point	47%

### COLD STORAGE (CONTROLLED ATMOSPHERE OR CA) FOR POTATO CAP: 1,00,000 BAGS (50 Kg/Bag) STORING CAPACITY:5000 MT. [EIRI-1163]

#### Cost Estimation

Plant Capacity	5000 MT./Day
Land & Building (9000 sq.mt.)	Rs. 2.53 Cr.
Plant & Machinery	Rs. 3.26 Cr.
Total Capital Investment	Rs. 6.02 Cr.
Rate of Return	12%

# Start Your Own Industry

## UPVC DOORS & WINDOWS FABRICATING PLANT (FIXING AND INSTALLATION OF DOORS AND WINDOWS OF UPVC PROFILES) [EIRI-1245]

PVC was produced for the first time in 1935 and has been industrially manufactured in large quantities for over 50 years. It has been developed into a material that can offer a wider range of properties and therefore has many different applications. The production process starts with sodium chloride, (common salt) from which chlorine gas is obtained by electrolysis. Petroleum or natural gas is used to produce ethylene, one of many products of the process known as cracking. Bringing together chlorine and ethylene, liquid vinyl chloride (VC) is produced which is immediately changed in the process by polymerisation into polyvinyl chloride.

### Cost Estimation

Plant Capacity	2000 sq.mt./Day
Land & Building (4000 sq.mt.)	Rs. 1.75 Cr.
Plant & Machinery	Rs. 89 Lacs
W.C. for 1 Months	Rs. 2.07 Cr.
Total Capital Investment	Rs. 4.96 Cr.
Rate of Return	79%
Break Even Point	30%

## PLASTICIZERS [EIRI-1230]

Plasticizers (UK = plasticisers) or dispersants are additives that increase the plasticity or fluidity of a material. The dominant applications are for plastics, especially polyvinyl chloride (PVC). The properties of other materials are also improved when blended with plasticizers including concrete, clays, and related products. The worldwide market for plasticizers in 2000 was estimated to be several million tons per year. Throughout the period from 1970 to 1995, the worldwide plasticizer markets grew at rates above the various GNPs; however this trend has started to decrease in North America and in Europe. In recent years, the average growth rate in those regions has ranged between 2 and 3%, with projected growth rate of 1-2%.

### Cost Estimation

Plant Capacity	20 Ton/Day
Land & Building (10,000 sq.mt.)	Rs. 11.28 Cr.
Plant & Machinery	Rs. 3.41 Cr.
W.C. for 3 Months	Rs. 27.26 Cr.
Total Capital Investment	Rs. 42.86 Cr.
Rate of Return	21%
Break Even Point	61%

## LIQUID GLUCOSE FROM POTATOES [EIRI-1530]

Potato is widely consumed as food all over the world. It contains the starch as a major carbohydrate. Surplus and cull potatoes are used as feed for live stock and also as raw material for the manufacture of starch, ethyl alcohol and a few other industrial products like,

dextrose, liquid Glucose etc. The potato contains approximately 18-21% of carbohydrates. The major carbohydrate is starch. This starch is comprising 65-80% of the dry weight of the tuber is calorifically the most important nutritional component. In the raw tuber, it is present as microscopic granules in leucoplasts lining the interior cell walls of parenchyma tissue.

### Cost Estimation

Plant Capacity	25 MT./Day
Land & Building (5 Acres)	Rs. 3.39 Cr.
Plant & Machinery	Rs. 8.05 Cr.
W.C. for 2 Months	Rs. 2.12 Cr.
Total Capital Investment	Rs. 14.18 Cr.
Rate of Return	18%
Break Even Point	69%

## LIQUID GLUCOSE AND MALTO DEXTRIN FROM BROKEN RICE [EIRI-1516]

Starch is a group of polysaccharides, composed of glucopyranose units joined together by glucosidic linkages. It conforms to the molecular formula, (C<sub>6</sub>H<sub>10</sub>O<sub>5</sub>)<sub>n</sub>, where n varies from a few hundred to over one million. Starch is found as the reserve carbohydrate in various parts of plants and is enzymatically broken down to glucose to other carbohydrates according to the metabolic needs of the plants. Industrially, starch is broadly divided into two types viz, natural and modified. Natural starches, also designated as unmodified starches or simply starches, are obtained from grains such as and sorghum, from roots like potato, tapioca and arrow root, and from the pith of the stems of certain palms such as sago.

### Cost Estimation

Plant Capacity	40 MT./Day
Land & Building (16'000 sq.mt.)	Rs. 13.47 Cr.
Plant & Machinery	Rs. 4.60 Cr.
Total Capital Investment	Rs. 24.43 Cr.
Rate of Return	36%
Break Even Point	47%

## MINI FLOUR MILL (ATTA, MAIDA, SUJI) [EIRI-1511]

The plant will have facility to produce, Maida, Sooji, Atta and bran. These products will be sold as per the guidance issued for Food and Civil Supplies Department of the concerned state. The same plant can be used to process other cereals such as rice gram, dal etc. However, attempt is made here to examine feasibility and profitability of processing wheat to produce Maida, Sooji, Atta and bran. Flour mill serve the purpose of processing wheat to convert it into flour. Wheat grains are the seeds of the wheat plant which is able to grow in kinds of soil and under widely differing climatic conditions.

### Cost Estimation

Plant Capacity	40 MT./Day
Land & Building (2000 sq.mt.)	Rs. 2.55 Cr.
Plant & Machinery	Rs. 57 Cr.
Total Capital Investment	Rs. 5.39 Cr.
Rate of Return	41%
Break Even Point	42%

## DRY WALL PUTTY (WHITE CEMENT BASED) [EIRI-1475]

White cement based Wall Putty a plastering material to fill the holes and patches before paint primer or distemper. In general, fillers & stoppers are paste-like materials, highly pigmented, used to fill surface imperfections (fillers) and to make good gross surface defects prior to painting operations (stoppers). Caulking compounds, putties and same cements have a boiled drying oil, usually combine with resins that act as the binder putty is the thick mixture of finely powdered calcium carbonate (whiting) and acid refined linseed oil which imparts good wetting and grinding characteristics.

### Cost Estimation

Plant Capacity	100 Ton./Day
Land & Building (1200 sq.mt.)	Rs. 1.20 Cr.
Plant & Machinery	Rs. 79 Cr.
W.C. for 1 Months	Rs. 4.25 Cr.
Total Capital Investment	Rs. 6.44 Cr.
Rate of Return	29%
Break Even Point	62%

## CATHETERS MANUFACTURING [EIRI-1490]

A catheter is a flexible tube made of latex, silicone, or Teflon that can be inserted into the body creating a channel for the passage of fluid or the entry of a medical device. For many years the epidermal catheters used were plain tubes made of available industrial compounds, and design was largely based on current need. Catheters are designed to perform tissue ablation (tissue removal) and even serve as conduits for thermal, optics, and various medical devices.

### Cost Estimation

Plant Capacity	2000 Tubes/Day
Land & Building (Area 1 Acre)	Rs. 2.03 Cr.
Plant & Machinery	Rs. 3.73 Cr.
W.C. for 1 Months	Rs. 1.13 Cr.
Total Capital Investment	Rs. 8.27 Cr.
Rate of Return	18%
Break Even Point	69%

## HDPE, PVC, LLDPE PIPES/ TUBES & FITTING [EIRI-1497]

PVC is a thermosetting plastic. In other words, it can only be softened and molded into form once. If it is softened and remolded a second time it will lose some of its favorable characteristics. PVC is very corrosion resistant. It is not a conductor and will not have an electrochemical reaction with acids and bases that it comes in contact with. For this reason, PVC is sometimes used to coat other materials for protection. PVC also has a high chemical resistance.

### Cost Estimation

Plant Capacity	5 MT./Day
Land & Building (75,000 sq.ft.)	Rs. 6.17 Cr.
Plant & Machinery	Rs. 1.38 Cr.
W.C. for 1 Months	Rs. 95 Lacs
Total Capital Investment	Rs. 8.67 Cr.
Rate of Return	25%
Break Even Point	56%

# Top Industries to Start

## BANANA CHIPS, BANANA PULP & BANANA POWDER (BANANA PRODUCTS)

[EIRI-1483]

The technology development in agriculture is very fast, it results in developing Tissue Culture Technique. Banana is basically a tropical crop, grows well in temperature range of 13°C - 38°C with RH regime of 75-85%. In India this crop is being cultivated in climate ranging from humid tropical to dry mild subtropics through selection of appropriate varieties like Grandnaine. Chilling injury occurs at temperatures below 12°C. The normal growth of the banana begins at 18°C, reaches optimum at 27°C, then declines and comes to a halt at 38°C. Higher temperature causes sun scorching.

### Cost Estimation

Plant Capacity	2.50 Ton./Day
Land & Building (2000 sq.mt.)	Rs. 88 Lacs
Plant & Machinery	Rs. 63 Lacs
W.C. for 2 Months	Rs. 1.02 Cr.
Total Capital Investment	Rs. 2.64 Cr.
Rate of Return	31%
Break Even Point	54%

## BOTTLING PLANT (COUNTRY LIQUOR)

[EIRI-1233]

There are nevertheless several very early references which can be taken to indicate that a potable spirit (like country liquor) was known many thousands of years ago. The earliest regarding excessive consumption of potable distilled spirit, i.e. country liquor and other products, appear to have come from China, some 1000 years B.C. Aristotle later mentions purifying sea water by evaporation, and also "wine which produces a spirit". For centuries the art of distilling remained firmly in the hands of alchemists. Herbs had long been thought to cure various maladies, agriurduly for Jaundice, fox glore, for blisters and it would seem that the alchemists argued that, if the juice of one of these herbs could be, say, quadrupled in strength, then the efficiency of cure would be multiplied four fold. The alchemists were responsible for many improvements in the art of distilling.

### Cost Estimation

Plant Capacity	10000 Ltrs./Day
Land & Building (1.52 Acres)	Rs. 2.11 Cr.
Plant & Machinery	Rs. 1.20 Cr.
W.C. for 1 Months	Rs. 1.31 Cr.
Total Capital Investment	Rs. 4.89 Cr.
Rate of Return	52%
Break Even Point	38%

## MAIZE & BY-PRODUCTS PROCESSING [EIRI-1421]

Starch is an abundant carbohydrate distributed worldwide in plants. Starch has been a major ingredient in man's diet over the centuries. In addition it has become a major industrial raw material. Plant seeds, roots and tubers are all sources of industrial

starch production. The commercial realities of the starch recovery process limit the industrial sources mainly to wheat, maize and tapioca. Indian starch industry mainly consumes maize as input raw material. Maize is doing wonderful things in our everyday life. Maize (Corn) contains about 70% starch, other components being protein, fibers and fat. The basis of the maize milling process is the separation of the maize kernel into its different parts.

### Cost Estimation

Plant Capacity	50 TPD/Day
Land & Building (10 Acres)	Rs. 1.03 Cr.
Plant & Machinery	Rs. 8.50 Cr.
W.C. for 1 Months	Rs. 2.16 Cr.
Total Capital Investment	Rs. 12.41 Cr.
Rate of Return	40%
Break Even Point	49%

## DETERGENT CAKE AND POWDER [EIRI-1485]

Synthetic detergents have developed in the beginning of 20th Century and started making in-roads into the area earlier served by washing compounds i.e. soaps made traditionally from oils/fats and caustic soda. Since soaps have comparatively lesser washing characteristics in hard water than synthetic detergents, synthetic washing compounds have been able to occupy a significant market which was enjoyed by washing soaps earlier. The term detergent originated from the latin word detergine (i.e. wipe off), is now-a-days applied to all synthetic washing compounds. Synthetic detergent is not only used as household cleaning material but also have industrial applications in textiles, pesticide industry as carriers, etc.

### Cost Estimation

Plant Capacity	40 MT./Day
Land & Building (6000 sq.mt.)	Rs. 4.32 Cr.
Plant & Machinery	Rs. 43 Cr.
Total Capital Investment	Rs. 7.06 Cr.
Rate of Return	74%
Break Even Point	30%

## COW DAIRY FARMING (AYRSHIRE/HOLSTEIN) AND MILK PROCESSING [EIRI-1486]

Dairy industry is of crucial importance to India. The country is the world's largest milk producer, accounting for more than 13% of world total milk production. It is the world largest consumer of dairy products, consuming almost 100% of its own milk production. Dairy products are a major source of cheap and nutritious food to millions of people in India and the only acceptable source of animal protein for large vegetarian segment of Indian population, particularly among the landless, small and marginal farmers and women. India's high-value, high-volume market for traditional dairy products and delicacies is all set to boom further under the technology of mass production. This market is the largest in value after liquid milk and is estimated at US\$3 billion in India and US\$1 billion overseas. More and

more dairy plants in the public, cooperative and private sectors in India are going in for the manufacture of traditional milk products.

### Cost Estimation

Plant Capacity	50000 LTR./Day
Land & Building (Area 30 Acre)	Rs. 13.98 Cr.
Plant & Machinery	Rs. 15.40 Cr.
W.C. for 1 Months	Rs. 2.71 Cr.
Total Capital Investment	Rs. 47.87 Cr.
Rate of Return	21%
Break Even Point	56%

## SURGICAL COTTON, ROLLER BANDAGE, CREPE BANDAGE & PLASTER CAST (READYMADE) E.G. GYPSONA, 3M CAST [EIRI-1494]

Absorbent Cotton also known as Surgical Cotton or Cotton Wool is mainly used for medical purposes in hospitals, nursing homes, dispensaries etc., Because of high fluid absorbency power, it is better known as absorbent cotton. The absorbent cotton should be chemically inert and soft to give maximum protection and should not cause irritation. These properties can be achieved by manufacturing the product as per standard method of manufacture. The raw cotton is processed by series of steps which render the cotton hydro-phallic in character and free from external impurities needed to be fit for use in surgical dressings and personal hygiene.

### Cost Estimation

Plant Capacity	250 Kg./Day Surgical Cotton
	1500 Kg./Day Roller Bandage
	1000 Nos./Day Crep Bandage
	1000 Nos./Day Plaster Cast (Readymade)
Land & Building (1000 sq.mt.)	Rs. 1.04 Cr.
Plant & Machinery	Rs. 53 Lacs
W.C. for 2 Months	Rs. 75 Lacs
Total Capital Investment	Rs. 2.37 Cr.
Rate of Return	28%
Break Even Point	63%

## DICALCIUM PHOSPHATE FROM ROCK PHOSPHATE [EIRI-0745]

Dicalcium phosphate exists in anhydrous as well as dehydrate form, the latter being the form marketed as a fertilizer. When pure, dehydrate form contains 41.26% P<sub>2</sub>O<sub>5</sub> (18.33%P) and is largely citrate-soluble. Dehydrate was more soluble than anhydrous. It was more soluble in ammonium sulphate solution than in others. The Naubauer test with barely using <sup>32</sup>P showed that the uptake of fertilizer phosphorous was more from the dehydrate form. The basic raw material for this product being rock phosphate.

### Cost Estimation

Plant Capacity	10 Ton/Day
Land & Building (2 Acres)	Rs. 2.35 Cr.
Plant & Machinery	Rs. 1.74 Cr.
W.C. for 1 Months	Rs. 52 Lacs
Total Capital Investment	Rs. 4.90 Cr.
Rate of Return	23%
Break Even Point	67%

## Market Survey Cum Detailed Techno Economic Feasibility Reports

- \* EIRI Project Reports are prepared by highly qualified & experienced consultants & Market Research and Analysis supported by a panel of Experts and Computerised.
- \* Data provided are reliable and up-to-date collected from manufacturers/suppliers, plant already commissioned in India.

**A complete List of Industrial Project Reports are given on [www.eiribooksandprojectreports.com](http://www.eiribooksandprojectreports.com)**

### EACH DETAILED PROJECT REPORT CONTAINS:

- **INTRODUCTION** : Project Mix, Uses & Applications, Quality Control Measure & Their Introduction for Attaining Required Properties Economy & Productivity Competence.
- **MARKET SURVEY** : Market Position, Installed Capacity Production, Anticipated Demand, Present Manufacturers, Statistics of Imports & Exports, Estimated Demand, Demand & Supply Gap (If available), L1/IL Issued Recently
- **PROCESS OF MANUFACTURE** : Inventory Controls & Tests, Comparative Study of Process for Manufacturing the Product, Formulations, Process Flow Sheet Diagram, Process Detail in Stages from Raw Materials to Finished Products
- **RAW MATERIALS** : Raw Material Specifications, Market Codes & Raw Material Prices, Sources of Procurement of Raw Materials [Imported/Indigenous]
- **PLANT & MACHINERY** : Range of Machineries Required, Detailed Specifications of Machines & Equipments, Prices of Machineries, Suppliers of Plant and Machineries.
- **LAND & BUILDING** : Total Land Area Requirement with Rates, Covered Area Break-up with Estimated Costs of Construction
- **PROJECT ECONOMICS** : Land & buildings, Plant, Machinery & Other Fixed Assets, Total Capital Investment, Working Capital Assessment, Raw Material & Consumable Stores, Staff Salaries & Wages, Utilities & Overheads, Total Cost of Project, Sources of Finance/Refinance, Break Even Point Determination.

**For assessing Market Potential, Corporate Diversifications, Planning, Investment Decision Making and to start your own setup, Entrepreneurs and Industrialists are most welcome to contact EIRI.**

**EIRI Technocrats and Engineers have just prepared  
"MARKET SURVEY CUM DETAILED TECHNO ECONOMIC FEASIBILITY REPORTS"**  
on following lucrative products which are most viable and profitable and having bright future scope

- \* COPPER SULPHATE FROM COPPER ASH/SCRAP
- \* CHELATED ZINC (ZN-EDTA) 12%
- \* ORTHOPAEDIC IMPLANTS AND INSTRUMENTS
- \* BARLEY MALT
- \* MINERAL TURPENTINE OIL (M.T.O.) FROM PETROLEUM (SUPERIOR KEROSENE OIL OR OTHER MATERIAL)
- \* M.S.FASTENERS AND S.S. FASTENERS
- \* P.V.C. COMPOUNDING (FRESH) FOR CABLES AND PVC PIPES
- \* BANANA FIBRE EXTRACTION AND HAND MADE PAPER
- \* BANANA & ITS BY PRODUCTS
- \* COLOUR AND ADDITIVES MASTERBATCHES
- \* METALLIC STEARATE
- \* SURGICAL METHYLATED SPIRIT
- \* KHADSARI SUGAR (500 TCD)
- \* COTTON (RUI) FROM WASTE

- \* COTTON CLOTH
- \* LAUNDRY & DRY CLEANERS
- \* COATED YARN
- \* TOUGHENED GLASS
- \* CAUSTIC SODA (SODIUM HYDROXIDE) (NaOH)
- \* ELECTROLYTIC PROCESS
- \* PLASTIC WASTE RECYCLING UNIT & PYROLYSIS PLANT FROM PLASTIC AND RUBBER WASTE (INTEGRATED UNIT)
- \* CHITIN & CHITOSAN FROM PRAWN SHELL WASTE
- \* PASTA PRODUCTION PLANT (SHORT PASTA)
- \* SODIUM HYDRO SULFITE THROUGH FORMALDEHYDE ROUTE CAP-20 TPD
- \* SODA ASH PLANT FROM SOLVAY PROCESS
- \* ONION, AND GARLIC POWDER WITH GRAPE DEHYDRATION (RAISINS)
- \* FLUSH DOORS
- \* DI-METHYL PHTHALATES (DMP)
- \* GLUTEN FREE BEER

[eiribooks@yahoo.com](mailto:eiribooks@yahoo.com)

- \* PVC AND PP FILES AND FOLDERS
- \* SULFAMIC ACID PURE CRYSTAL AND OTHER GRADE (GP,SR & TM GRADE)
- \* DECORATIVE LAMINATED SHEET (SUNMICA)
- \* ALPHA CELLULOSE POWDER FROM COTTON WASTE
- \* CAST POLY PROPYLENE FILMS (CPP FILM)
- \* CASHEW NUT PROCESSING
- \* BIOGAS PRODUCTION (1500 CUBIC METER PER DAY)
- \* SOYA MILK AND PANEER
- \* MINERAL TURPENTINE OIL (MTO)

B. of Perfumes &amp; Flavours</li> <li>* Hand Book of Perfumes with Formulations (2nd Edn.)</li> <li>* Technology of Perfumes, Flavours &amp; Essential Oils</li> <li>* H.B. of Flavours Technology</li> </ul>	
<b>FOOD &amp; AGRO PROCESS, TOMATO PROCESSING, PRESERVATION, DEHYDRATION, FRUIT BEVERAGE, POTATO, MAIZE, MEAT, BANANA</b>		<b>SOAP, DETERGENT &amp; ACID SLURRY</b> <ul style="list-style-type: none"> <li>* Household Soap, Toilet Soap &amp; Other Soap</li> <li>* Profitable Small Scale Mfr. of Soaps &amp; Detergents</li> <li>* Synthetic Detergents with Formulations (2nd Edn.)</li> <li>* Modern Technology of Acid Slurry, Surfactants, Soap and Detergents with Formulae</li> <li>* Complete Technology Book on Detergents with Formulations (Detergent Cake, Dishwashing Detergents, Liquid &amp; Paste Detergents, Enzyme Detergents, Cleaning Powder &amp; Spray Dried Washing Powder)</li> <li>* Manufacture of Washing Soap, Toilet Soap, Detergent Powders, Liquid Soap &amp; Herbal Detergents and Perfumes with Formulations</li> </ul>		<b>SOLAR PV PANELS, ENERGY</b> <ul style="list-style-type: none"> <li>* Technology Of Solar Pv Panels, Energy, Cells, Lantern, Cooler, Light System, Cfl Inverter, Photovoltaic System, Power Plant, Water Heater, Collector, Solar Cooling, Refrigeration, Solar Drying, Tractor, Home System, Dish Engine, Nanotechnology &amp; Other Solar Products Manufacturing</li> </ul>	
<ul style="list-style-type: none"> <li>* Fruits &amp; Vegetable Processing Hand Book (2nd Edn.)</li> <li>* Fruit Beverage &amp; Processing with Mango</li> <li>* Food Processing &amp; Agro Based Industries (2nd Edn.)</li> <li>* Preservation &amp; Canning of Fruits and Vegetables</li> <li>* Hand Book of Food Dehydration &amp; Drying</li> <li>* Meat Processing &amp; Meat Products Hand Book</li> </ul>		<b>BUILDING MATERIAL &amp; CHEMICALS</b> <ul style="list-style-type: none"> <li>* Technology of Building Materials &amp; Chemicals with Processes</li> </ul>		<b>TEXTILE, GARMENTS, DYEING...</b> <ul style="list-style-type: none"> <li>* Mod. Tech. of Bleaching, Dyeing, Printing &amp; Finishing of Textiles</li> <li>* Technology of Textiles (Spinning &amp; Weaving, Dyeing, Scouring, Drying, Printing and Bleaching)</li> <li>* Garments Manufacturing Tech.</li> </ul>	
				<b>PULP &amp; PAPER TECHNOLOGY</b> <ul style="list-style-type: none"> <li>* H.B. of Pulp &amp; Paper, Paper Board &amp; Paper Based Tech.</li> </ul>	

**LIST OF PUBLICATIONS/BOOKS PUBLISHED BY: ENGINEERS INDIA  
RESEARCH INSTITUTE 4449, NAI SARAK, MAIN ROAD, DELHI - 6 (INDIA)**

Name of Books	Rs. US\$	Name of Books	Rs. US\$	Name of Books	Rs. US\$
<b>SPICES, SEASONING &amp; COLD STORAGE</b>		<b>RUBBER CHEMICALS, COMPOUNDS &amp; RUBBER INDUSTRIES</b>		<b>ORGANIC FARMING &amp; FOOD/NEEM</b>	
* Technology of Spices and Seasoning of Spices with Formulae		* Rubber Chemicals & Processing Industries		* Hand Book of Organic Farming and Organic Foods with Vermi-Composting & Neem Product	
* Spices & Packaging with Formula		* Modern Rubber Chemicals, Compounds & Rubber Goods Technology		<b>FISH FARMING &amp; FISHERY PRODUCTS</b>	
* Start Your Own Cold Storage Unit		* Technology of Rubber & Rubber Goods Industries		* Hand Book of Fish Farming and Fishery Products	
<b>NON WOVEN TECHNOLOGY</b>		<b>AYURVEDIC MEDICINES</b>		<b>TEXTILE AUXILIARY &amp; CHEMICALS</b>	
* Complete Tech. of Nonwovens Fabrics, CarryBags, Composite, Geotextiles, Medical Textiles, Fibres, Felts, Apparels, Spunlace and Absorbent Nonwoven		* Ayurvedic & Herbal Medicines with Formulae		* Textile Auxiliaries and Chemicals with Processes & Formulations	
<b>PHARMACEUTICALS &amp; DRUGS</b>		* Hand Book of Ayurvedic Medicines with Formulations		* Technology of Textile Chemicals with Formulations	
* Pharmaceuticals and Drugs Technology with Formulations		<b>STAINLESS STEEL, NON FERROUS METALS, BILLETS &amp; ROLLING MILL</b>		* Modern Technology of Textile Auxiliary and chemicals with formulations	
<b>LEATHER &amp; LEATHER PRODUCTS</b>		* Modern Technology of Non Ferrous Metals and Metal Extraction		* Textile Processing Chemicals, Enzymes, Dye Fixing Agents and Other Finishes with Project Profiles	
* Hand Book of Leather & Leather Products Technology		* Processing Technology of Steels and Stainless Steels		<b>DISINFECTANTS, CLEANERS, PHENYL, DEODORANTS, DISHWASHING DETERGENTS ETC.</b>	
<b>BIOTECHNOLOGY</b>		* Modern Technology of Rolling Mill, Billets, Steel Wire, Galvanized Sheet, Forging & Castings		* Manufacture of Disinfectants, Cleaners, Phenyl, Repellents, Deodorants, Dishwashing Detergents & Aerosols with Formulations	
* Hand Book of Biotechnology		* Manufacturing Technology of Non-Ferrous Metal Products		<b>COFFEE &amp; COFFEE PROCESSING</b>	
<b>CERAMICS &amp; CERAMIC PROCESS</b>		<b>FOOD ADDITIVES/CHEMICALS AND SWEETENERS &amp; FOOD EMULSIFIERS</b>		* Start Your Own Coffee & Coffee Processing	
* H.B. of Ceramics & Ceramics Processing Technology		* Modern Technology of Food Additives, Sweeteners and Food Emulsifiers		<b>ONION CULTIVATION, DEHYDRATION, POWDER PROCESSING &amp; PACKAGING</b>	
<b>TREE FARMING</b>		* Technology of Food Chemicals, Pigments and Food Aroma Compounds		* Complete Book on Onion Cultivation, Dehydration, Flakes, Powder, Processing and Packaging Technology	
* Hand Book of Tree Farming		<b>DISPOSABLE MEDICAL PRODUCTS</b>		* Ph: +91 9811437895, 9811151047, 91-11-23918117, 23916431, 45120361, 23947058, 64727385	
<b>MUSHROOM PROCESSING</b>		* Technology of Disposable Medical Products		* E-Mail : eiriprojects@gmail.com, eiritechnology@gmail.com	
* Hand Book of Mushroom Cultivation, Processing & Packaging		<b>SOYA MILK, TOFU &amp; SOY PRODUCTS</b>		* Website: www.eiriindia.org, www.industrialprojects.in	
<b>BIOFERTILIZERS &amp; VERMICULTURE</b>		* Technology of Soya Milk, Tofu, Hydrolyzate, Allied Soyabean Products with project Profiles		Deposit the amount in "EIRI	
* Biofertilizers & Vermiculture		* Technology of SOYBEAN Products with Formulae		"Account with HDFC BANK -	
<b>BIODEGRADABLE PLASTICS AND POLYMERS</b>		<b>PRODUCTS FROM WASTE</b>		05532020001279 (RTGS/NEFT/	
* Modern Technology of Biodegradable Plastics and Polymers With Processes (Bio-Plastic, Starch Plastics, Cellulose Polymers & others)		* Technology of Products from Wastes (Industrial, Agriculture, Medical, Municipality, Organic & Biological) By Panda		IFSC CODE: HDFC0001981) OR	
* Production of Biodegradable Plastics and Bioplastics Technology		* Products from Waste Technology Hand Book		ICICI BANK - 038705000994	
<b>FROZEN FOOD AND FREEZE DRYING</b>		<b>WINE PRODUCTION</b>		(RTGS/NEFT/IFSC CODE: ICIC0000387)	
* Complete Hand Book on Frozen Food Processing & Freeze Drying Technology		* Technology of Wine Production and Packaging			
* Modern Technology of Frozen Food Products		<b>CASTING TECHNOLOGY</b>			
<b>MINERAL AND MINERALS</b>		* Casting Technology H.Book			
* Hand Book of Minerals and Minerals Based Industries					

Send Draft in favour of "Engineers India Research Institute" (Postage Rs. 100/- Extra)
